433MHz high speed FM radio transceiver module

The BiM2 transceiver is an enhanced replacement for our original BiM module. It offers greater transmit power, higher data rates, greatly improved receiver interference rejection and a lower profile. The module is ideal for enabling bi-directional wireless connectivity in battery powered or handheld applications

BiM2–433-160

Features

- CE Certified by independent Notified Body according to the R&TTE Directive (1999/5/EC)
- Verified to comply with Radio standard ETSI EN 300 220-3 by UKAS accredited Test Laboratory
- Verified to comply with EMC standard ETSI EN 301 489-3 by UKAS accredited Test Laboratory
- Usable range to 200 metres external, 50 metres in building
- Data rates up to 160kbps
- SAW controlled 10mW FM transmitter
- Double conversion FM superhet receiver
- SAW front end filter and full screening
- Plug in replacement for Radiometrix BiM-433-40
- 3V or 5Volt supply at < 20mA

The BiM2 is a half duplex radio transceiver module for use in high-speed bi-directional data transfer applications at ranges up to 200metres. The module operates on the European licence exempt frequency of 433.92MHz. The small footprint of 23 x 33mm and low profile of 4mm together with low power requirements of <20mA @ 3 to 5 Volts enable convenient PCB installation. The high raw data rate capability of 64kbps and fast state change times will support high data throughput of up to 3 kbyte/s in 'streaming' applications or alternatively allows very short air time utilization in multi-node scanning networks.

Applications

- PDA's, organizers and laptops
- Handheld terminals
- EPOS equipment, barcode scanners, belt clip printers
- Data loggers
- Audience response systems
- In Building environmental monitoring and control
- High end security and fire alarms
- Restaurant ordering systems
- Vehicle data up/download

Further information will be available imminently, however, BiM-433-F data sheets contains applications information that is equally applicable to the new BiM2.

Functional overview

The transmit section of the BiM2 comprises of a SAW stabilised and FM modulated 433.92MHz oscillator feeding a 10mW buffer/output stage. Operation is controlled by a TX select line, the output achieving full power within 100µs of this line being pulled low. Modulation is applied at the TXD input and may be either a serial digital stream at the same levels as the module's supply rails (digital drive) or a high level analogue waveform with a pk to pk amplitude close to the modules supply level (linear drive). Modulation shaping is performed internally by a 2nd order 44kHz LPF to minimize spectral spreading. The RF output is filtered to meet the requirements of EN 300-220-3 and fed via a fast antenna changeover switch to the 50Ω antenna pin.

The receive section of the BiM2 is a double conversion FM superhet with IF's of 16MHz and 150kHz. The dual gate MOSFET LNA is followed by a 750kHz bandwidth SAW filter to provide >60 dB's rejection of all out of band signals. The receiver is controlled by an active low select line and will power up in <1ms. A post-detection 2nd order 35kHz LPF establishes the signal bandwidth and ensures the clean operation of the subsequent adaptive data slicer. The slicer has a 2ms averaging time constant and is optimised for balanced data, e.g. bi-phase codes. A fast acting carrier detect output will indicate the presence of any RF signals.

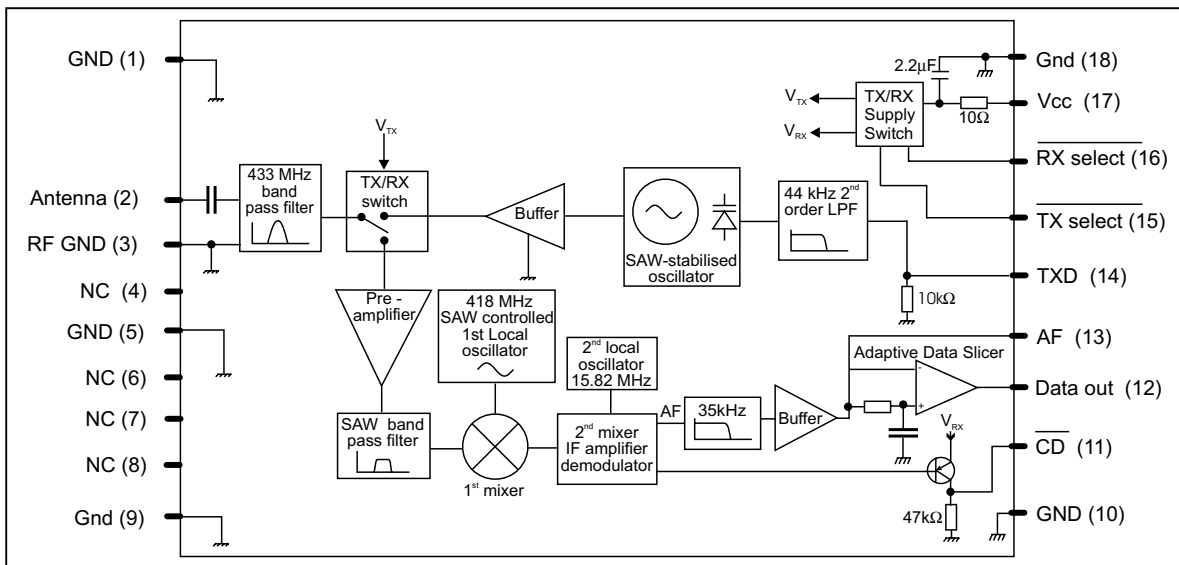

Figure 1: Block diagram

Pin description:

RF GND   *pin 1 & 3*
RF ground pin, internally connected to the module screen and pin 5, 9, 10, 18 (0 Volt). This pin should be connected to the RF return path (e.g. coax braid, main PCB ground plane etc.)

Antenna   *pin 2*
50Ω RF input from the antenna, it is DC isolated internally. (*see* antenna for suggested antenna/feeds).

0Volt   *pins 5, 9, 10, 18*
Supply ground connection and screen.

CD   *pin 11*
Carrier Detect - When the receiver is enabled, a low indicates a signal above the detection threshold is being received. The output is high impedance (50kΩ) and should only be used to drive a CMOS logic input.

RXD   *pin 12*
This digital output from the internal data slicer is a squared version of the signal on pin 13 (AF). It may be used to drive external decoders. The data is true data, i.e. as fed to the transmitter. Load impedance should be >1kΩ and <1nF

AF *pin 13*

This is a buffered and filtered analogue output from the FM demodulator. It has a standing DC bias of 1.2 volts and 400mV $_{P-P}$ base band signal. It is useful as a test point or to drive linear decoders. Load impedance should be >2kΩ and <100pF.

TXD *pin 14*

This DC coupled modulation input will accept either serial digital data (0V to Vcc levels) or High level linear signals. Input impedance is 10kΩ.

TX select *pin 15*

Active low transmit select. 10kΩ internal pull up to Vcc.

RX select *pin 16*

Active low receive select. 10kΩ internal pull up to Vcc.

Pin 15 TX	Pin 16 RX	Function
1	1	power down (<1µA)
1	0	receiver enabled
0	1	transmitter enabled
0	0	self test loop back

Note: Loop test allows the receivers to monitor the transmitted signal. The receiver will not receive external signals whilst the TX of the module is enabled.

Vcc *pin 17*

+ve supply pin. +3.0 to +5.5 volts @ <20mA . The supply must be clean < 20mV$_{P-P}$ ripple. A 2.2µF de-coupling capacitor and 10Ω series resistor are used internally to filter the supply.

Figure 2: Physical dimension

Weight: 5g (typical with pins)

Survival Maximums:

Operating temperature: -10°C to + 55°C
Extended operation at   -20°C to + 70°C
Reduced specification
Storage temperature   :   -40°C to + 100°C

Vcc (pin 17)   -0.1V to +10.0 V
All other pins   -0.1V to +Vcc+0.6V
Antenna (pin 2)   ±50 V @ <10MHz , +20dBm @ > 10MHz

Note: Operation of the BiM2 above 5.5 volt with efficient antenna may result in radiated power levels above the licensed power level.

Figures apply to 5V versions unless otherwise noted
Temperature 20° C unless noted

TX power up to full RF	2	-	100	-	µs	

Notes: 1. from 45% to 55% duty cycle
2. CD works up to 40° C

Antenna requirements

Three types of integral antenna are recommended and approved for use with the module:

A) ***Helical***   Wire coil, connected directly to pin 2, open circuit at other end. This antenna is very efficient given it's small size (20mm x 4mm dia.). The helical is a high Q antenna, trim the wire length or expand the coil for optimum results. The helical de-tunes badly with proximity to other conductive objects.

B) ***Loop***   A loop of PCB track tuned by a fixed or variable capacitor to ground at the 'hot' end and fed from pin 2 at a point 20% from the ground end. Loops have high immunity to proximity de-tuning.

C) ***Whip***   This is a wire, rod ,PCB track or combination connected directly to pin 2 of the module. Optimum total length is 16cm (1/4 wave @ 433MHz). Keep the open circuit (hot) end well away from metal components to prevent serious de-tuning. Whips are ground plane sensitive and will benefit from internal 1/4 wave earthed radial(s) if the product is small and plastic cased

	A	**B**	**C**
	helical	*loop*	*whip*
Ultimate performance	**	*	***
Easy of design set-up	**	*	***
Size	***	**	*
Immunity proximity effects	**	***	*
Range open ground to similar antenna			200m

The antenna choice and position directly controls the system range. Keep it clear of other metal in the system, particularly the 'hot' end. The best position by far, is sticking out the top of the product. This is often not desirable for practical/ergonomic reasons thus a compromise may need to be reached. If an internal antenna must be used, try to keep it away from other metal components, particularly large ones like transformers, batteries and PCB tracks/earth plane. The space around the antenna is as important as the antenna itself.
Figure 3: Antenna

Ordering information

The standard BiM2, order code BiM2-433-64 is supplied with pins fitted for operation on 5 volt supplies (4 to 5.5v)

Versions and Variants

BiM2-433-64-3V

A 3 volt version is available, BiM-433-64-3V for operation at 3.3volts (3.0 to 4.0 V) it is identical to the standard version but has been tested and aligned for operation at 3.3v.

BiM2-433-64-S

This is intended for RPC or Manchester code only and has fast settling time (maximum 1ms)

Additionally, for volume orders, Radiometrix can supply the BiM2 to the customers' PCB pin requirements or even without any pins.

BiM2-433-160-5V

This fast version BiM2 has a raw data rate of up to 160kbps. 3V version also available (BiM2-433-160-3V).

Description: FM Radio Transceiver Module

In the opinion of RFI, the Technical Construction File demonstrates that the Apparatus to which it relates conforms to the essential requirements of Article 3.2 of Council Directive 1999/5/EC on radio equipment and telecommunications terminal equipment and the mutual recognition of their conformity. The Apparatus cannot be used with a loop antenna.
